INTERCEPTOR MOVEMENT

INTRODUCING ZIPWAKE PRO

The ultimate upgrade to our renowned Dynamic Trim Control System. Zipwake PRO is the next generation of interceptor-based trim control with interceptors that move five times faster than before, intelligent control features like Active Pitch, Active Roll and a new interface that has been refined and polished to deliver a smoother, more intuitive user experience.

WHAT'S NEW IN PRO

0.3

It takes just 0.3 seconds for the blade to extend from 0 to 100%.

ACTIVE PITCH CONTROL PERFECT PITCH FOR PERFECT TRIM

Keeps your boat at the optimal running trim angle. Regardless of head seas, following seas, beam seas, or changes in weight distribution.

ACTIVE ROLL CONTROL FROM MOTION TO CONTROL IN A SPLIT SECOND

Enhanced Active Roll reacts instantly to changing conditions, ensuring smoother handling and a more comfortable ride.

ROLL ANGLE OFFSET TUNED ANGLE FOR A DRIER RIDE

The roll controller's target angle can be offset by turning the control panel or mini controller roll wheel. A few degrees less can mean a drier ride.

BALANCED TURN PRECISION IN EVERY TURN

Balanced turn is now sharper, faster, and more precise, ensuring controlled turns at any speed.

WAKE SHAPING WAVES FOR THE PERFECT RIDE

The wake-shaping feature provides precise control for fine-tuning wakes.
